

# Automated Manufacturing Systems

IPS has provided automated manufacturing solutions for 15 years. Applications have included material handling, machine control, mine conveyor systems, chemical process control, and robotics systems. IPS has a history of working collaboratively with material handling manufacturers, machine tool makers, process designers, and plant personnel to provide solutions that are tailor made for specific applications yet flexible for future growth.

IPS has the experience and know how to not only automate a process but to integrate process data into an overall information system that can be used for quality records, downtime and throughput reporting, process observation, and remote control of process parameters from plant offices.

IPS has degreed engineers on staff with an average industry experience of 15 years. This experience combined with a shop that can build and test hardware and software prior to installation at the customers plant, will provide customer confidence that IPS will meet or exceed their expectations.
