

Automated Process and Test Systems

Typical automated process

Typical presentation of information for 'management at a glance'

IPS has a proven track record of automating factory processes and test equipment.

Experience in automotive assembly plants, sub-suppliers, foundries, and product development enables IPS to design and build systems that are specific to customer requirements while anticipating future needs and designing in flexibility for growth.

IPS has the experience and know how to not only automate a process but to integrate that process, measurement, or test into an overall information system that can be used for quality records, downtime and throughput reporting, process observation, and remote control of process parameters from plant offices.

IPS has degreed engineers on staff with an average industry experience of 15 years. This experience combined with a shop that can build and test hardware and software prior to installation at the customers plant, will provide customer confidence that IPS will meet or exceed customers expectations.
